PROFESSIONAL SUMMARY

AI trainer and full-stack builder with paid contract experience improving large language model outputs while shipping production web apps in TypeScript, React, Next.js, and Convex. Pairs rubric-based model evaluation, prompt refinement, and fact-checking with hands-on product development - and draws on 15+ years of revenue-operations leadership to keep technical work grounded in real business outcomes. Turns ambiguous needs into reliable, tested systems.

CORE CAPABILITIES

AI Evaluation & Training: LLM response evaluation, preference ranking, rubric-based assessment, instruction adherence, factual accuracy, reasoning analysis, prompt refinement, research, fact-checking

Full-Stack Development: TypeScript, React, Next.js, Convex, Supabase/Postgres, OpenAI API, REST APIs, webhooks, PDF generation, testing & CI

GTM & Revenue Systems: Lead routing, lifecycle governance, pipeline reporting, CRM hygiene, workflow automation, stakeholder adoption

PROFESSIONAL EXPERIENCE

AI Trainer & LLM Evaluator – DataAnnotation

May 2026 - Present

Independent Contractor | Remote

- Evaluate AI-generated responses for code correctness, factual accuracy, logical coherence, instruction adherence, clarity, and tone against project-specific rubrics across coding, factuality, and comparative evaluation projects.
- Design and refine complex coding and workplace prompts that probe model behavior across interaction modes, edge cases, and real-world constraints.
- Compare model outputs, identify unsupported claims and reasoning failures, and write concise, evidence-based preference rationales.
- Earned access to higher-complexity coding, factuality, and comparative evaluation projects after passing platform qualifications.

SELECTED TECHNICAL PROJECTS

MK Workbench – Production Job-to-Invoice Platform

React | TypeScript | Convex | OpenAI API | jsPDF | Playwright | Vitest | Vercel

- Built and deployed a private, mobile-ready operations platform in production use by a working plumbing business - covering intake, document review, customer/job records, line items, invoice drafting, PDF generation, finalization, and archive.
- Modeled a Convex-backed workflow state machine with server-enforced Admin / Worker / Developer roles, customer matching, source cleanup, and full audit history (actor, action, before/after).
- Integrated review-gated OpenAI image extraction (evidence-bound, human-approved) behind GitHub Actions CI, Vitest + Playwright coverage, and production safety controls.

Insight – Mobile-First Field Sales & Lead Tracker

Next.js | TypeScript | Convex | Leaflet | Papa Parse | Playwright

- Built a phone-first, map-centric lead and appointment tracker with live geolocation, CSV import, editable lead details, quick actions, and one-handed field UX.
- Modeled distinct lead signals (pre-visit, visit, consultation, recency) on a Convex schema with events and rollups, plus validated CSV import (field mapping, duplicate review, batched writes).
- Added tokenized public visit cards with open-tracking and revocation, seeded data, and smoke-test coverage for core routes.

CERTIFICATION

Certified by micro1 - Recognized for outstanding performance during micro1's AI Interview | August 2026

Memorex – AI-Native Project-Memory Layer (prototype)

Next.js | React | TypeScript | Tailwind | Vitest | Playwright | GitHub Actions | Postgres

- Designed a memory layer for AI coding agents that captures decisions, issues, checkpoints, and final summaries, then compiles compact, citation-backed "resume packets" for the next run.
- Built deterministic (non-vector) retrieval with stable ranking and explicit, cited source expansion - local JSON by default with an optional Postgres mode.
- Grounded in a recurring LLM workflow problem: preserving reliable project context across multi-agent, multi-session work.

Additional Builds

Next.js | Supabase/Postgres | React | TypeScript | Vite | PDFKit | Vercel

- A generator-sales proposal app (role-aware access, pricing controls, uploads, e-signatures, PDF output), a roof-pitch estimator with diagnostics and overlays, and a live portfolio site with deployment validation.

ADDITIONAL EXPERIENCE

Sales & Marketing Director – Central Texas

2024 - Present

- Translate field requirements into lead-routing logic, lifecycle rules, reporting structure, and usable internal systems.
- Scaled monthly lead volume routed and tracked from ~150 to ~600 through routing structure, lifecycle governance, and reporting discipline.
- Design workflows around real rep behavior to cut duplicate touches, strengthen follow-up, and lift adoption across mobile field teams.

Sales Manager – Multiple Organizations

2010 - 2024

- Improved lead routing, follow-up systems, deduplication, pipeline accountability, and dashboard visibility across revenue teams.
- Reduced manual work by an estimated 15-20 hours/week through automation-minded process redesign and clearer handoffs.

TECHNICAL SKILLS

Languages & Frontend: JavaScript, TypeScript, HTML5, CSS3, React, Next.js (App Router), Vite, Tailwind CSS, shadcn/ui

Backend & Data: Convex, Supabase, Postgres, REST APIs, OpenAI API, webhooks, schema design, storage, row-level security, Zod, PDF generation, Python

AI & Evaluation: LLM evaluation, comparison & ranking, instruction adherence, factuality review, reasoning analysis, prompt refinement, structured extraction, technical writing

Testing & Delivery: Playwright, Vitest, Testing Library, ESLint, Git, GitHub Actions, Vercel, pnpm, acceptance criteria, smoke testing, code review

DEVELOPMENT PRACTICES

- Ships in small, reviewable increments with scoped acceptance criteria, testing gates, and clear handoff notes.
- Validates AI-generated code and combines automated checks with manual verification of critical user workflows.
